CORE PAPER XVII: INDUSTRIAL MICROBIOLOGY

Objectives

- To impart theoretical knowledge of role of microbes in Industrial production of different bioproducts.
- To describe the industrial Fermentation processes.
- To explain the Construction, Design and Operation of Fermentor.
- To encompass the use of Industrially important microorganisms in the manufacture of food or industrial products.
- To study the use of microorganisms for the production of Antibiotics, Vaccines, Organic acids, Organic solvents, Amino acids, Vitamins and Industrial enzymes.

Course Outcomes

From the Industrial Microbiology paper, students acquire the knowledge in the large scale production of Industrial product and providing the trends to cater the needs of industry.

Course Outcome (CO)	Description	Cognitive level (K level)
CO-1	Describe different fermentation techniques, bioreactor design, inoculum development for industrial fermentations, Microbial growth and product formation kinetics.	K1
CO-2	Media formulation and sterilization, isolation, preservation and improvement of industrially important microorganisms.	K6
CO-3	Assimilate knowledge on basics and different stages in Industrial fermentation process.	K3
CO-4	Evaluate theoretical knowledge on design, construction and working of different types of fermenters and medium formulation on an industrial scale.	K3, K5
CO-5	Plan industrial production of microbial products and stages in downstream process.	K4
CO-6	Understanding the Industrial production of Antibiotics, Vaccines, Organic acids, Organic solvents, Amino acids, Vitamins and Industrial enzymes.	K2
